

INDEX OF SUBJECTS

Acceleration (*See also* Acceleration waves; Acoustics; Singular surfaces)
 general 108
 peculiar 219, 220
 Acceleration waves
 general 171–174, 208–210
 in viscous fluids 175, 176
 elastic type 176–180, 183–190
 homothermal 177, 178, 184–186, 188
 quasi-elastic 182, 183
 propagation conditions 184, 185
 homocaloric 184–186
 in mixtures 246, 253, 257
 Accessibility 51, 52, 91, 480
 Accumulation function 15, 486, 487
 Acoustic axes, numbers, tensors 184–186
 Acoustics (*See also* Acceleration waves; Acoustic axes; Linearized theories)
 classical 157, 171, 186
 of materials with memory 176–190
 equivalence theorem 185
 in mixtures 279–284
 Additivity 5, 88, 510
 Adiabatic expansion in kinetic theory 414, 415
 Adiabatic process. *See* Process, adiabatic; Process, isocaloric
 Adiabats 6
 Admissibility criteria
 entropy 214
 viscosity 215–217
 shock 216, 217
 entropy rate 216, 217
 Affinity, chemical 198, 360, 361
 Amplitude
 definition 174
 critical 188–190, 195, 208
 growth and decay of 188–190, 195, 199
 shock 195, 196, 199, 203
 Angular momentum. *See* Momentum
 Anholonomic 164
 Anisotropic fluids 369, 379
 Approximate cycles 547
 Area-bounded 510
 Atomic substances, permanence of 353–356
 Atoms 353, 354
 Axioms (*See also* Constitutive axioms; Thermometric axiom; Union axiom)
 in general 63, 78
 of mechanics
 single media 64, 65, 107–109
 mixtures 221–224, 230
 of thermodynamics
 homogeneous processes
 of Carathéodory 25, 26, 49–56
 of Lecture 1 64, 65, 67, 68
 of Appendix 1A 86, 88, 92, 96, 100, 103
 single deformable media 120, 145, 146, 482–490, 503–516, 550–553
 mixtures 226, 227
 of fading memory 145, 146, 150, 151, 153, 176–179
 Balance, principles of
 single media 108–110, 191, 192, 213
 mixtures 223, 238, 264–266, 287, 292–295, 331, 344, 386
 general 292
 Balanced 511
 Ballistic energy 39, 40, 507
 Bernoulli equation 208, 209
 Bi-additive. *See* Additivity
 Body 63–65, 68, 78, 107, 286, 345, 509, 526, 547
 Body force 72, 108, 435

566

INDEX OF SUBJECTS

Body heating 110, 117, 221, 227, 228, 513
 Boltzmann's irreversibility lemma 415, 416
 Boltzmann's theory of visco-elasticity 188
 Bound
 for heating 67–69, 77
 for work done 102, 103
 Bowen's theory of chemical reactions 358–363
 Brownian motion 311
 Bubble equation, Rayleigh's 312, 313
 Bubbles. *See* Suspensions, dilute
 Buoyancy 331
 Caloric (*See also* Entropy; Equation of state)
 definition 111
 growth 226, 372, 379
 flux 232
 supply 232
 in kinetic theory 415, 416, 473–475
 Caloric Theory of Heat 6, 7, 111
 Calorimetry 3, 5, 13, 88
 Calorodynamic process. *See* Process, calorodynamic
 Calory (*See also* Entropy 68, 69, 111, 225, 376, 377, 417
 Capillary pressures 260
 Carathéodory's failure 49–57
 Carnot cycle, process 4, 7, 14, 15, 89–93, 133, 137, 138, 551
 Carnot line 4, 10, 17
 Carnot web 89, 90, 93
 Carnot-Clapeyron Theorem 7, 94
 Carnot's function 4, 7, 94
 Carnot's General Axiom ("theorem") 92, 547
 Carnot's program 6, 48
 Cauchy's laws of motion 108, 177, 178
 Causes and effects. *See* Determinism
 Chain rules 146, 147, 156, 179, 180
 Chapman. *See* Enskog
 Chapman-Jouguet model 202
 Chemical affinity 198, 360, 361
 Chemical kinetics 363, 364
 Chemical potentials 228, 229, 234, 239, 272
 Chemical reactions 197–205, 237, 238, 274, 302, 353–364
 Circulation 333
 Clausius property 481
 Clausius-Duhem inequality (*See also* Clausius-Planck inequality; Dissipation; Second Law of Thermodynamics)
 Truesdell & Toupin's "postulate of irreversibility"
 for smooth circumstances 21, 28, 42, 43, 117–119, 122, 123, 125, 132, 134, 135, 138–140, 148, 157, 158, 159, 175, 177, 211, 546
 for shocks 192, 214
 Duhem's 28, 38, 372, 419, 420, 423, 447, 449, 473, 475
 Capriz & Podio-Guidugli's "dissipation axiom" for constrained media 165
 Bowen and Truesdell's "axiom of dissipation" for mixtures 227, 235, 289, 299, 300, 304, 352
 Clausius-Duhem temperature. *See* Temperature, Feinberg & Lavine's
 Clausius-Planck inequality (*See also* Kelvin-Planck theory) 19, 22, 25, 69, 105, 110, 506
 Clausius-Serrin Second Law 15
 Coarse-Fine theory pair 517–521
 Coldness (*See also* Temperature) 111, 119, 226
 Coleman's theorem 141–157
 Collision operator 410, 411, 413, 414, 416
 Combustion 302
 Compressibility 167
 Concentration (*See also* Mass density, peculiar)
 mass fraction 220
 molar 355
 Condition 128–131, 140
 Conduction of heat (*See also* Fourier inequality; Fourier-Duhamel

- Conduction of heat (*continued*)
 theory; Navier-Stokes-Fourier theory) 3, 43, 187
- Conductivity
 perfect 168
 thermal 307
 hydraulic 334
- Conductors of heat, strong (*See also* Fourier-Duhamel theory) 167
- Conservation laws. *See* Balance, principles of
- Consistency principle 517
- Constant continuation, function, *etc.* 149–151
- Constituent of a mixture 219, 237, 265, 290, 326, 327, 345
- Constituent space 355
- Constitutive axioms, functions, functionals (*See also* Constraints)
- in classical thermodynamics
 axioms, functions 5, 88, 540
 restrictions 7, 9, 20, 93–95, 101
 domain 87
- in dissipative materials in general 39, 66
- in homogeneous dissipative processes
 axiom, functionals 65, 68
 restrictions 71, 72
 examples 73–78
- in deformable media, single
 axiom, functionals 120, 141, 143–153, 176–178
 restrictions 121, 143, 147, 148, 153, 182
 examples 142, 143, 156, 191, 365, 369, 370, 372, 377, 380, 387
 for equilibrium 150–155
 use of approximations 473
- in deformable media with internal variables
 axiom, functionals 197, 359
 restrictions 198
- in mixtures
 axiom, functionals 230, 287, 300, 301, 303, 319–321, 331, 332
 examples 243, 246, 250, 254, 258, 259, 267, 268, 307–313, 359, 370, 372
- Constitutive axioms *etc.* (*continued*)
 restrictions 247, 248, 250, 254, 270, 272–274, 359, 360–362, 371, 385, 386
 comparison with kinetic theory 412, 426–433, 436, 438–440, 449
 use of approximations 473
 attempts to avoid using them 525
- Constitutive equations. *See* Constitutive axioms *etc.*
- Constraint pair 165, 166
- Constraints (*See also* Mixtures, constrained) 159–170, 289, 297
- Contact 108, 510
- Continuation. *See* Constant continuation; Jump continuation; Linear continuation; Quadratic continuation
- Continuity set 213
- Continuum mechanics
 of single media 67, 107–109, 390, 528
 of mixtures 219–224
- Convective transport 340
- Crystalline symmetries (*See also* Isotropy) 367, 368, 396–401
- “Curie’s principle” (*See also* Onsagerism) 379, 387–391
- Cycle, cyclic process. *See* Carnot cycle; Process, cyclic
- Cyclic heating measure 131
- Dalton’s law 235
- Damping. *See* Decay
- Darcy’s law 332, 333
- Decay of waves 188–190, 195, 199, 211
- Definite proportions, law of 357
- Deformation gradient
 single media 121
 mixtures 241, 329
- Deformation, rate of. *See* Stretching
- Density (*See also* Mass density; Molecular density; Number density) 510
- Descriptors 518

- Determinism (*See also* Constitutive axioms *etc.*)
 general 68, 141, 148
 effective 71, 120, 161
 for mixtures 230, 231, 300
 in kinetic theory 423
- Detonation 202, 203, 302
- Diffusion (*See also* Drags, diffusive)
 in general 219–352, 356–358, 370–372, 379, 384–386
 thermal 246, 276, 278, 279
 Fick’s theory 276–278, 340, 370
 Self-balancing 352–358
- Diffusion coefficients, Diffusion-thermo coefficients, Thermal diffusion coefficients 276–279
- Diffusion velocity 224, 276, 291
- Diffusive drags. *See* Drag forces
- Dilatancy 310
- Dilute mixtures 228, 229, 385, 386
- Director 169
- Discontinuities. *See* Process, discontinuous; Fourier inequality; Kinetic theory of gases, basic concepts, boundary conditions; Poisson’s condition; Singular surfaces; Wall; propagation; Weak singularities.
- Disparate 345
- Dissipation (*See also* Clausius-Duhem inequality; Clausius-Planck inequality; Dissipation inequality, reduced; Kelvin-Planck theory)
 in general 7, 103, 211, 212
 axiom of
 for homogeneous processes 84
 for mixtures 227, 235, 289, 299, 300, 304, 352
 internal 112–117, 119, 121, 148
- Dissipation inequality, reduced (*See also* Residual inequality)
 for single media 71, 120, 142, 161
 for mixtures 238, 239, 300, 304, 359
- Dissipation line (*See also* Fourier line) 11, 18, 19
- Distribution function. *See* Molecular density
- Divergence, weak 511
- Domains of responses 428
- Dominant solutions 451, 467
- Drag, Stokes 308
- Drag coefficients, diffusive 307
- Drags, diffusive (*See also* Diffusion; Drag forces)
 in general 242, 244, 248–250, 255
 diffusive 274, 370, 371
 binary 278, 370, 371
- Elastic materials, Elasticity
 single media 157, 185
 mixtures 237–263
- Endothermic. *See* Reaction
- Energetic (“specific internal energy”, in some appendices called “energy”)
 definition 110, 221
 in single media 114, 141–156
 free, in single media 114
 in mixtures 227, 239, 242, 273, 300, 304, 346
 in kinetic theory 408
- Energy (*See also* Energetic)
 internal (*See also* First Law of Thermodynamics) 8, 10, 12, 67, 84, 95, 101, 102, 223, 224, 511, 545
 balance of 16, 17, 67, 105, 110, 174, 191, 192, 224, 294–296, 504
 total 22
 ballistic 39, 40
 kinetic 67, 109
 free 70
 growth of 222–224, 228, 232, 294–297, 348
 binding 346, 511
 flux of (*See also* Heat, flux; Heating-flux) 346, 347
- Enskog’s process 421, 436, 439, 448, 471
- Enthalpy 115
- Entropic (“caloric”, “specific entropy”) 111
- Entropy (*See also* Caloric; Calory; Entropic; Entropy flux;

- Entropy (*continued*)
 Entropy growth; Entropy production; Entropy rate; Entropy supply; Second Law of thermodynamics
 in classical thermodynamics
 discovered by Rankine 9, 10
 rediscovered by Clausius 10
 equivalent constitutive restriction 12
 rigorous proof of existence 95, 101, 102
 for irreversible processes in general
 according to Clausius 13
 according to Gibbs 21, 22
 according to Bridgman 36
 a maximum in equilibrium 21
 for homogeneous irreversible processes 67–69, 103, 104
 for deformable bodies (also Specific entropy)
 as a primitive quantity 111, 141
 relations it satisfies 112–121
 Feinberg & Lavine's proof of existence 123–140
 Coleman & Owen's proof of existence 482–484
 Šilhavý's proof of existence 554
 for mixtures 221, 226, 227, 239, 268, 269, 298, 299, 348–352
 in kinetic theory 442–449
 bindings 514
 Entropy admissibility criterion 214, 215
 Entropy flux 227, 228, 232, 264, 268, 269, 349, 350, 351, 417, 418, 443–449, 513
 Entropy growth (*See also* Caloric, growth of) 351
 Entropy production of a reaction (*See also* Entropy rate) 162, 163, 164
 Entropy rate, Increase of caloric 116, 117, 216, 217, 513
 Entropy rate admissibility criterion 216
 Entropy, specific (*See also* Entropy for deformable bodies) 111
 Entropy supply 264, 444
 Equation of state (*See also* Thermodynamics, First Law and Second Law)
 thermal 3, 88
 local 17, 60
 caloric 60, 73, 74, 76, 113, 157, 377, 378
 Equations of motion, various 245, 252, 256, 257, 261, 427
 Equilibrated force 292–294, 297
 Equilibrium (*See also* Kinetic theory, equilibrium; Thermostatistics)
 Gibbsian (*See also* Thermostatistics) 39
 trend to (*See also* *H*-theorem) 40, 452, 453, 456–459
 general 60, 65, 66, 74, 133, 142
 response 150–155
 site (*See also* Equilibrium state) 152
 space 152, 153
 state 199, 200, 360–363, 376
 false 199, 361, 362
 strong 199, 201, 361–363
 weak 199, 201
 of mixtures 251, 255, 256, 258, 306
 local, kinetic 415, 452
 thermal 524–526
 Equipresence 77, 120, 222, 230, 231, 301, 359
 Equivalence theorem in acoustics 185
 Euler-Hadamard theory of fluids. *See* Gas flows
 Euler's laws of motion 108
 Event-point 526, 528
 Exothermic. *See* Reaction
 Experiment 59, 78–80
 Experiments
 on heat conduction 368, 374–375
 on diffusion 371
 Extensibility 167
 Extent of reaction 197, 202, 356–358
 Exterior 510
 Fading memory 143, 144, 151, 412, 481
 Failure 288
 Fick's law. *See* Diffusion, Fick's theory

- Field equations (*See also* Equations of motion) 16, 107–110, 224, 265, 266
 Fields of gross physics 379
 Filtration 330
 Fine-Coarse theory pair 517–521
 First Law of thermodynamics (*See also* Energy, balance of)
 in classical thermodynamics 9, 10, 84, 101, 102
 used to define heat 52, 53
 as an axiom 65, 67, 103, 109, 110, 223, 346–348, 511
 in the kinetic theory 413
 Šilhavý's proof 551, 552
 Fluids (*See also* Kinetic theory of gases; Navier-Stokes-Fourier theory of fluids)
 in gas dynamics 60, 66
 mixtures 228–235, 237, 264–325
 anisotropic 369, 379
 non-simple 423, 424
 simple 468, 469
 Flux (*See also* Entropy flux; "Forces and fluxes"; Heat, flux of; Heating-flux) 346, 512
 Force (*See also* "Forces and fluxes")
 in mechanics (*See also* Pressure; Stress tensor) 64, 65, 67, 79, 108, 427
 microstructural 287, 292–294, 313
 equilibrated 292–294, 297
 "Forces and fluxes" 276, 277, 377–382, 385, 402, 403
 Foundations Line 11, 16, 18, 19, 25, 28
 Fourier-Duhamel theory of heat conduction (*See also* Navier-Stokes-Fourier theory of fluids) 176, 187, 276–278, 365–369, 373–375, 378, 387, 388, 396–401, 494–502
 Fourier condition 167, 174
 Fourier inequality 116, 117, 119, 274
 Fourier line 4, 10, 17
 Frame-dependence 429–431
 Frame-indifference 230, 232, 242, 267, 300, 373, 429
 Free energy. *See* Energy
 Fresnel-Hadamard-Duhem theorem 185
 Friction
 internal. *See* Dissipation, internal; Navier-Stokes-Fourier theory of fluids
 linear 76–78
 Functionals, constitutive. *See* Constitutive axioms *etc.*
 Gas flows (*See also* Fluids, mixtures; Kinetic theory, gas-dynamic solutions; Navier-Stokes-Fourier theory of fluids) 16, 60, 112, 113, 186–189, 464
 "Gas laws" 3, 408, 409
 "Gibbs equation" 274
 "Gibbs-Duhem equation" 274
 Granular media 286, 287, 296
 Gravitational forces 332–334
 Gross. *See* Kinetic theory, gross
 Growth variables 301
 Growths (in some appendices called Productions) 222–228, 230–232, 265–267, 292–298, 328, 348, 353–355
 Gurtin's theorems 147–155
H-theorem 23, 415–419, 446, 473, 475
 Hadamard's conditions. *See* Hugoniot's conditions
 "Hamilton's extended principle" 318–320
 Heat (*See also* Caloric Theory; Conduction; Heating; Heating bound; Heating-flux; Heating supply; Latent Heat(s); Specific Heat(s); Radiation)
 gain of 5, 83, 87, 548
 absorbed 7, 14, 87, 549
 emitted 14, 87, 549
 flux of (*See also* Heating-flux) 16, 348, 512, 513
 general 85, 110
 of reaction 198
 sources 367, 368

- Heat-bath 447, 506
 Heat equation (*See also* Fourier-Duhamel theory) 494-502
 Heat-transfer coefficient 307
 Heat-transfer line (*See also* Fourier line) 12, 18, 19, 28
 Heating 3, 67-69, 87, 110, 128-131, 524
 Heating bound 67-69, 77
 Heating-flux 16, 38, 110, 221, 224, 229, 230, 239, 443-447, 452, 453, 456, 513
 Heating supply. *See* Body heating; Heat, sources
 Helium II 281-284
 Hilbert's method in kinetic theory 448
 History in general 1
 History of a function 68, 141
 Holonomic 164
 Homocaloric 184-186
 Homogeneous body 83, 366
 Homogeneous process. *See* Process, homogeneous
 Homogeneous velocity field 402
 Homothermal (*See also* Shearing, homothermal) 177, 178, 184-186, 188
 Hotness
 primitive concept 19, 25, 83, 85-87, 484, 522, 523
 constructed
 by Feinberg & Lavine 135-138, 524
 by Gurtin & Williams 514-515
 by Pitteri 524-543
 Hugoniot relation 192, 193, 210
 Hugoniot's conditions 174, 334
 Hydrostatics 415
 Hyperelastic material 185
 Hyperstress 160
 Ideal gas (*See also* Gas dynamics; J-ideal gas; Temperature, ideal-gas)
 classical 3, 85, 86
 defined by scale of temperature 87, 99
 used to determine absolute temperature 271
 kinetic theory 408, 409, 414, 415
 Ikenberry's theorem 455, 456
 Incompressible 298
 Inertial force 332-334
 Inertial framing (*See also* Frame-dependence) 528
 Inner parts 221
 Instability. *See* Stability
 Insulated 112
 Interconvertibility of heat and work
 in cycles 8, 9, 546
 in isothermal processes 8
 Interface 332, 333
 Internal constraints. *See* Constraints
 Internal energy. *See* Energy
 Internal state variables 39, 358-363
 Irreversibility
 "explanation of" 406
 in kinetic theory 406, 415-419
 Irreversible process. *See* Process, irreversible; Dissipation
 "Irreversible thermodynamics", linear ("TIP") 41, 225, 229, 234, 265, 276-279, 337-339, 373-383, 386-395, 402-404, 526
 Isocaloric process (*See also* Adiabatic) 70, 73, 77, 114
 Isolated 112, 350, 506
 Isothermal process. *See* Process, isothermal
 Isotropic (*See also* Symmetries) 242, 243, 256, 369, 379, 383, 388-391
 J-ideal gas 100, 101
 Jump discontinuity (*See also* Singular surface; Wave propagation) 146, 171-210, 191-210, 214, 266, 269, 333
 Jump set 213, 214
 Kelvin-Planck theory 126, 127, 132-140

- Kinetic theory of gases (*See also* Kinetic-Statistical line; Maxwell's second kinetic theory; Statistical mechanics) 407-476
 general aspects
 nature and history 16-18, 27, 383, 405, 406, 420-424
 basic concepts
 molecular density 407
 number density, mass density 407, 408
 stream velocity 408
 pressure-tensor, energetic, heating flux 408

Publications by C. Truesdell for Springer-Verlag

Books written:

An Idiot's Fugitive Essays on Science: Methods, Criticism, Training, Circumstances

Rational Thermodynamics, Second Edition

The Tragicomical History of Thermodynamics, 1822–1854

The Concepts and Logic of Classical Thermodynamics as a Theory of Heat Engines, Rigorously Constructed Upon the Foundation Laid by S. Carnot and F. Reech (co-author S. Bharatha)

Essays in the History of Mechanics

The Elements of Continuum Mechanics

Six Lectures on Modern Natural Philosophy

Wave Propagation in Dissipative Materials (co-authors B.D. Coleman, M.E. Gurtin, I. Herrera R.)

The Non-Linear Field Theories of Mechanics (co-author W. Noll)

The Classical Field Theories (co-author R. Toupin)

Journals founded and edited:

Archive for Rational Mechanics and Analysis (co-editor J. Serrin)

Archive for History of Exact Sciences

Other volumes and series edited or co-edited:

Encyclopedia of Physics, Volumes VI–IX

Ergebnisse der Angewandten Mathematik, Reihe für Mechanik

Springer Tracts in Natural Philosophy

Continuum Theories of Inhomogeneities in Simple Bodies, by W. Noll, R.A. Toupin, and C.-C. Wang

The Foundations of Mechanics and Thermodynamics: Selected Papers by W. Noll
